

General Safety Warnings

Updated: June 17, 2025

To ensure proper and safe use of our product, we recommend that you follow the guidelines below:

1. Installation and Mounting

- If the product requires installation or mounting, any accompanying instructions or manuals for similar products must be followed.
- Ensure that the product is properly secured and safely mounted if required.

2. Use of the Product

- Always use the product for its intended purpose. Improper use may result in injury to persons, damage to property, or damage to the product itself.
- Be aware that the product may contain moving parts that can pose a risk during operation. Avoid contact with moving parts while the product is in use. Never insert fingers, tools, or other objects into moving parts.
- Note that some products and parts may become hot during use. Avoid direct contact with these surfaces to prevent the risk of burns. Allow them to cool down before handling or servicing.
- Be aware that some products and components carry electric current, and special caution is therefore required. Avoid contact with electrical components while the product is connected to power.
- Handle the product with care. Some products may have sharp edges, heavy weight, or fragile parts.

3. Maintenance and Inspection

- Perform regular inspections to ensure that the product is in good condition.
- Replace any damaged or worn parts immediately.
- Clean the product according to the manufacturer's recommendations to maintain optimal function.
- If the compressed air system needs to be serviced, it must first be depressurized. All work involving compressed air must be carried out with great care.

4. Disposal of Parts

- Ensure that any parts no longer in use are disposed of responsibly. Follow local guidelines for waste management and recycling, especially if parts contain hazardous materials or electrical components. Contact an authorized waste management service if you are unsure how to properly dispose of the product or its components.
